

Mapping the Brain: An Introduction to Connectomics

Your Project Title

Your name

January 20, 2015

1 Abstract

Remember all of that OCAR stuff we talked about? Well, we're adding a letter. It is now OCARF, where the F stands for future work. It is important here to be concise with all of your points: don't simply repeat those in your proposal, but consider how your project shifted focus and what the final state ended up being. Again, one sentence per point is ideal.

2 Results

Here you should detail what came from your project (i.e. what data do you have to show for your work). Here you should include a qualitative and numerical description of the results themselves, as well as at least 1 *good* figure. A *good* figure means one that displays data both clearly, effectively, and aesthetically. This can be a difficult thing to do, so if you have questions don't be afraid to ask us.

This whole final report should be no longer than 1 page of writing, and no more than 2 full pages with the figure(s) (include them as an appendix). Of course, don't forget references (those of you using LaTeX can grab the proposal template for how to use insert the references again).

Good luck!
